

>> effective

Only a clean wound can heal. The curason offers a simple and cost-effective method for gentle and thorough wound cleaning.

>> biofilm

Thanks to its special design, biofilms can be disrupted and removed with the curason. Bacteria lose their protective shield and can be effectively attacked with a disinfectant solution.

>> curasonix

We are a team of physicians and scientists with decades of experience in medical device technology.

We have developed an innovative technology, which will make the well-known advantages of ultrasound-supported wound cleaning available to you everywhere.

curasonix GmbH is ISO 13485:2016 certified.

The curason is **CE** certified as a class II b medical device (CE 698761 from bsi 2797).

curason
ultrasonic
wound cleaning

>> gentle

A combination of mechanical abrasion and ultrasound-supported micro-cleaning ensures the best possible debridement and unsurpassed gentleness and effectiveness.

Many patients report less pain during treatment.

>> safe

To avoid cross-contamination from patient to patient we invented a software based single-use cleaning-head concept.

>> hygiene

Thanks to its special design, costly cleaning operations of the handsets are not necessary. After treatment, the cleaning head is simply properly disposed of.

Due to the novel design, the environment of the patient is not contaminated if used properly and does not have to be elaborately cleaned after treatment.

>> homecare

Many patients never reach a specialized treatment facility for chronic wound healing. With curason, you are able to bring the innovative treatment to the patient.

>> environment

Based on the innovative concept of curasonix, only small amounts of waste are generated, which can be easily disposed of with your normal clinic or practice waste. In case it becomes necessary, the handsets will simply be replaced by us.

>> effect

Thanks to its three mechanisms of action (macro-abrasion, micro-abrasion and ultrasound), the curason cleans the wound gently and powerfully at the same time.

>> use

You can learn all that is required for the correct operation and handling easily and briefly on your own. Extensive training and costly courses are not necessary.

new solution for
infected wounds
